

HANDWHEELS

A handwheel is a convenient solution for manually operating a jack when using machine screw jacks in intermittent positioning applications. Handwheels are available in a range of diameters from 4 to 10 inches and can be adapted for use on jacks from the MJ series up to the 20 ton capacity model.

NOTE: Handwheels do not include a brake. Handwheels are not recommended for use with ball screw jacks. When using handwheels with a jack that can back-drive (12:1 and lower) an additional locking mechanism may be required to prevent “creep”.
