LINEAR MOTION PRODUCTS

acme & ball screws • actuators • linear motion drive components • engineering ingenuity
In 1969, Joseph H. Nook Jr. founded Nook Industries, Inc., intent on becoming a global supplier of Linear Motion products. Ball screws, both rolled and ground, were the cornerstone products in the early '70s, putting Nook Industries on the map as a successful business and a trusted company.

Today, Nook Industries provides a complete line of linear motion products, serving a wide range of industries. As a leading manufacturer of engineered products, our expertise in testing and design, and our continual pursuit of new capabilities and skills create the best possible quality solutions to meet the most stringent customer requirements. This is underscored by the fact that companies around the world depend on the quality products provided by Nook Industries to ensure their success.

Pairing traditional and proven design with the latest technology, Nook Industries manufactures products that customers value. The expansion of product lines and the development of application specific components and engineered systems have propelled Nook Industries to the forefront of the industry.

Nook Industries is committed to customer satisfaction and providing high-quality, high-value products that are delivered on time at a competitive price.
QUALITY
We provide the quality you expect and deserve. (See page 14-15.)

SERVICE
Our sales teams are factory-trained specialists. From pricing and delivery inquiries, to determining product suitability — we are prepared to answer all your questions and provide excellent service.

VALUE
Nook Industries is committed to offering competitive pricing. Our applications engineers can provide you with options tailored to your budget.

DELIVERY
Need your order in a hurry? Ask about our express delivery. From prototypes to high-volume requirements, we work hard to ensure your parts are delivered on-time.

MADE IN AMERICA
As a veteran-owned company, we are proud that most of our products, including our components, are manufactured and assembled here in Cleveland, Ohio, USA.

VERTICAL INTEGRATION
Our vertically integrated facility allows greater control of all in-house processes from design engineering through shipping.

IN-HOUSE CAPABILITIES & TECHNOLOGY
In-house design/engineering capabilities in conjunction with our state-of-the-art manufacturing technology combines expertise with flexibility to provide you with a solution for your custom application.

VARIETY
We can offer you more than one solution for your requirement.

DESIGN
Our assembly drawings can be downloaded into your files to allow you to check dimensions before you purchase a product. Standard products can be modified to accommodate space constraints and custom envelopes.

INTERACTIVE WEBSITE
Our website provides comprehensive engineering resources such as downloadable 2D/3D drawings, engineering calculators and product specifications as well as the ability to communicate with our technical department at your convenience. (See back cover for more details.)
BALL SCREW PRODUCTS

Nook precision ball screws are available in hundreds of different designs to meet virtually any performance criteria. Ball screws are cataloged by screw thread accuracy: standard rolled, precision rolled and ground. Ball nuts are offered in standard and preloaded designs.

MINIATURE METRIC

For decades, Nook has produced custom small diameter ball screws and nuts for the aerospace and medical industries; these standard metric miniatures are the result of that experience. Available in alloy or stainless steel, small diameter screws provide engineers a globally accepted product for smaller footprint applications where high accuracy, repeatability and durability are prerequisite.

<table>

**PLANETARY ROLLER SCREWS**

Nook planetary roller screws are used in the most demanding and precise linear motion applications. With a greater number of contact points a roller screw provides stiffness and higher load ratings compared to a ball screw.

**END MACHINING**

Linear motion applications utilizing a drive screw require high tolerance screw end machining matched with precision bearing mounts. Nook Industries has the complete capability to provide end machining including:

- Precision cut-to-length
- Annealing
- Straightening
- CNC turning and milling
- Grinding
- Assembly
- Inspection
- Specialized material handling and packaging

**BEARING SUPPORTS**

Bearing mounts must be designed to withstand both the radial and the thrust loads generated by the screw. Precision bearing blocks provide a complete solution for any linear motion application.

- Universal double and single-mount
- Flange single and double mount
- Integrated motor mounts available
Nook offers a complete line of standard and custom engineered ball screw and machine screw actuators for applications from 1/4 ton up to 100 tons. Actuators can be used individually or in multiple jack arrangements for a larger mechanical system. There are no standard travel lengths — each worm gear screw jack is built to specification. Configurations available include: linear or rotary motion output (upright or inverted), double clevis, keyed (anti-rotation), and anti-backlash.

ELECTRIC CYLINDERS

Electric cylinders are ruggedly designed and produced in standard models with thrust capacities from 500 lbs. to 40,000 lbs. They are supplied in a Single Reduction, Double Reduction, or an In-Line Configurations. Electric Cylinders are driven by acme screw and ball screws. Electric Cylinders can be supplied for outdoor applications.

MODULAR ACTUATOR PRODUCTS

MODULAR ACTUATORS

Nook modular linear actuators are flexible positioning systems made of self-supporting and wear resistant aluminum profiles. Modular linear actuators can be used as a single axis solution or assembled for a multitude of gantry XY and XYZ positioning duties including inspection, pick-and-place, assembly or dispensing applications.

Nook modular linear actuators are fully assembled with either roller bearing, profile rail or V-groove guidance and are driven by a belt, ball screw, acme screw or rack and pinion. Matched non-driven models are available for system guidance requirements. Over 35 models, each with several available sizes, meet the requirements of guidance, load and speed for precision and commercial linear motion applications.

Nook Automation Technology and Control (ATC) products include stepper and optional servo motors, drives, controls and power supplies. Nook ATC helps you size and select these components to suit your design requirements. We can also match them with your Nook screw assembly or actuator, and deliver you a complete integrated motion control solution that meets your application’s size, performance and control objectives.

**NOOK ATC SAVES TIME AND EFFORT WITH TURNKEY MECHATRONIC SOLUTIONS.**

Let us help you early in the design phase of your application. Put our experience and expertise to work for you; our mechanical and electrical engineers can help you create the motion control solution that is right for your application, your budget and your development time line.

Nook ATC provides your company with the level of value-added support that is right for you and your motion control system:

- Assist with sizing and selection of required components and sub-systems including motors, drives, motion controllers, feedback, gear heads, controls, guidance and support to expedite getting your product to market
- Minimize delivery lead times by maintaining key inventories necessary to build your actuation motion control system

HELIX LEAD SCREW PRODUCTS

HELIX™ Linear Technologies, a subsidiary of Nook Industries, is the most high-tech lead screw manufacturing facility in the world. With the release of our new precision lead screws, HELIX produces the broadest product line of any lead screw manufacturer globally. We offer a complete line of nuts in standard and anti-backlash designs with centralizing threads to match our precision lead screws. Our lead screw assemblies have the lowest backlash of any nut on the market. With the release of our new NAB and AAB product lines, HELIX has even more economical options in the 1/8” to 1” diameter range. We have also developed additional custom anti-backlash nut designs, which are available upon request.

When you need Acme, Trapezoidal, or Speedy (high lead) lead screws with a precision low backlash nut, or a state-of-the-art anti-backlash design, we deliver the highest quality and exceptional value to our customers.

BALL SPLINES

Ball splines are convenient and efficient devices that allow friction free linear motion while transmitting torque. Because of their reliability and high efficiency, they are utilized to replace conventional splines. In a ball spline assembly, recirculating bearing balls carry the load between the rotating member (inner race) and the rotating/sliding member (outer race).

<table>

- EXCEL™ self-aligning linear bearings
- HG hardened and ground linear shafting
- Shafting, pillow blocks and complete slide systems

**APPLICATION-SPECIFIC CUSTOM ENGINEERED PRODUCTS:**
- Specialty materials
- Custom coatings
- Customer-specific testing
- MIL-spec

Nook Industries has the design expertise, manufacturing capability, and the experience to help your special projects from concept to start-up and beyond. Whether you need a simple modification, or an entirely new approach to a problem, contact us early in your design stage. We look forward to working with you.
When you select Nook Industries as your supplier, you are assured that your product will be designed, built and tested to perform to your expectation. Pre-production activity includes understanding your performance, price and delivery requirements. From this, engineering calculations, predictive modeling, prototype development, and form, fit, and function testing verify we meet your design criteria. Once in production, the following inspection and testing procedures insure quality is maintained throughout the process.

VALIDATION AND VERIFICATION

Through many years of rigorous development, Nook Industries has proven its designs and manufacturing processes against the most stringent standards and specifications. Design and process verification and validation tools are employed throughout the product life cycle.

CERTIFICATIONS

Nook Industries, Inc. is certified to ISO-9001-2008 Internationally Recognized Quality System. Nook also serves many customers in the Aerospace and Medical device markets and has complied with those Quality System Requirements as well.

ITAR

Nook Industries is registered with the Department Of State For International Traffic In Arms Compliance.

INSPECTION CAPABILITY

LASER LEAD MEASUREMENT

Precise lead error gauging is utilized to validate processes to conform to Nook internal specifications and customer requirements.

ROUNDNESS MEASUREMENT

Critical to quality, characteristics such as roundness are monitored throughout the screw manufacturing process.

CONTOUR MEASUREMENT

Prior to the start of any production run, thread form geometry is precisely measured to stringent engineering specifications.

METALLURGICAL LAB

The metallurgical lab is capable of determining material composition from raw materials to final product. Micro-hardness and case depth inspection are routine checks that validate the heat treat process.
TESTING

EFFICIENCY MEASUREMENT
Nook Engineering has designed test machines to measure and validate screw assembly efficiency.

FUNCTIONAL TESTING

Our engineered testing processes perform analysis and verification of product life, durability and performance as defined in your Product Launch Process and Assurance Plan.

The engineered testing provides predictive tools, generates data for prognostics, and validates performance wear models. Life tests can also help determine performance under multiple operating conditions. For customers developing new systems, Nook offers proof testing to help accelerate product release dates.

HIGH LOAD MODULAR TEST SYSTEM
40,000 LB LOAD 100" STROKE

Torque Measurement
Preloaded ball screw assemblies are evaluated to determine compliance with engineering specifications utilizing a Dynamic Torque Testing Machine.

QUALITY TOOLS:

- Design for Six Sigma manufacturing
- D.O.E. (Design of Experiments)
- APQP (Advanced Product Quality Planning)
- DFMEA, PFEMA
- FEA (Finite Element Analysis)
- DVP&R (Design Verification Plan & Report)
- Reliability Testing
- Process validation to 21 CFR Part 82 (Medical Device)
If you are looking for a precision linear motion solution, look to our website for all the design engineering expertise you need at the tip of your finger:

- Extensive product information
- Detailed diagrams and product data
- Engineering calculators
- Installation instruction and manuals
- Detailed application case studies and stories
- downloadable CAD models and drawings
- Complete model download history so you can retrieve a previously downloaded model
- Fully configurable part numbers with 3D model representation
- Full catalog PDFs
- Online product quoting
- Live chat with customer service and application engineers
- Extensive linear library featuring a wide ranging product information

ACCESS COMPLETE ENGINEERING DATA AND PERFORMANCE SPECS IN OUR PRODUCT DESIGN CATALOGS...
